Acknowledgement

We would like to express our sincere thanks to our college J.H.A. Agarsen College for giving us the opportunity to do this project on the topic 'Contact Manager System'. This project helped us to learn about managing data and basic programming concepts. We also thank our staff members and friends who supported us in completing this project.

Introduction

A Contact Manager System is a simple application used to store and manage contact information such as names, phone numbers, email addresses, and addresses. This system helps users easily add, view, update, search, and delete contact details. It is useful for organizing personal or professional contacts efficiently.

Objectives

- To store contact details in an organized way.
- To allow users to add new contacts.
- To search and view existing contacts easily.
- To update and delete contact information when needed.

System Requirements

Hardware Requirements:

- Computer or Laptop
- Minimum 4 GB RAM
- Keyboard and Monitor

Software Requirements:

- Operating System: Windows / Linux
- Programming Language: C / Python / Java
- Text Editor or IDE

Methodology

The Contact Manager System works using a simple menu-driven program. The user selects options such as adding a new contact, viewing all contacts, searching for a contact, updating details, or deleting a contact. The system processes the request and displays the result to the user.

Conclusion

The Contact Manager System is a useful project that demonstrates how data can be stored and managed using a computer program. This project helped us understand basic programming logic, data organization, and user interaction.
